

ANOVA test

Hypothesis testing in ANOVA

→ Partitioning of variance in ANOVA

$$H_0: \mu_1 = \mu_2 = \mu_3 = \dots = \mu_k$$

H_A : At least one of the sample mean is not equal.

$$\mu_1 = \mu_2 = \mu_3 = \dots \neq \mu_k$$

test statistics = Variance b/w sample

Variance within sample

↓ α_1 $\xrightarrow{\text{var between the sample}}$ α_2 $\xrightarrow{\text{var between the sample}}$ α_3

Variance within sample $\left\{ \begin{array}{l} 1 \\ 2 \\ 3 \\ 4 \end{array} \right.$

$\left\{ \begin{array}{l} 5 \\ 6 \\ 7 \\ 8 \end{array} \right.$

$\left\{ \begin{array}{l} 9 \\ 10 \\ 11 \\ 12 \end{array} \right.$

One way ANOVA

→ one factor with atleast two levels

Q There are three dosage of a medicine given to three sample of the patients. The ratings if the headache is reduced (1-10). Are there differences in the three conditions ($\alpha = 0.05$)?

① $H_0: \mu_{0mg} = \mu_{10mg} = \mu_{100mg}$

H_A : Not all are equal

② $\alpha = 0.05$, one tail test

③ Calculate F statistics

$$F_{\text{statistics}} = \frac{\text{Variance b/w Sample}}{\text{Variance within sample}}$$

0mg	10mg	100mg
9	7	4
8	6	3
7	6	2
8	7	3
8	8	4
9	7	4
8	6	3
		2
$\Sigma a_1 = 57$	$\Sigma a_2 = 47$	$\Sigma a_3 = 21$

	Sum of Squares (SS)	df	MS (SS/df)	F
✓ b/w the Sample				
✓ within sample				
Total				

* Sum of squares b/w sample: $\Sigma \frac{(\Sigma a_i)^2}{n} - \frac{T^2}{N}$, where $n = 7$
 $N = 21$

0mg = $\Sigma a_1 = 9 + 8 + 7 + 8 + 8 + 9 + 8 = 57$

10mg = $\Sigma a_2 = 7 + 6 + 6 + 7 + 8 + 7 + 6 = 47$

100mg = $\Sigma a_3 = 4 + 3 + 2 + 3 + 4 + 3 + 2 = 21$

$$= \frac{57^2 + 47^2 + 21^2}{7} - \frac{(57 + 47 + 21)^2}{21}$$

→ 125

$$= 98.67$$

* Sum of squares within the sample

$$\begin{aligned}
 SS_{\text{within}} &= \sum y^2 - \frac{(\sum a_i)^2}{n} \\
 &= 9^2 + 9^2 + 7^2 + 8^2 + \dots + 7^2 + 6^2 + 6^2 + \dots + 4^2 + 3^2 + \dots + 2^2 \\
 &= 853 \\
 &= 853 - \frac{(57 + 47 + 21)^2}{7} = 10.29
 \end{aligned}$$

	Sum of Squares (SS)	df	MS (SS/df)	F
$\xleftarrow{\text{df}} \text{no of samples} - 1$ $= 3 - 1 = 2$	98.67	2	49.34	$\frac{49.34}{0.54} = 86.56$
b/w the sample				
within sample	10.29	18	0.54	

$\xleftarrow{\text{df}} \text{df with sample}$
 $N - a (\text{no of groups})$
 $21 - 3 = 18$

Total.
 108.96 20
 \downarrow
 $N - 1$
 $= 21 - 1 = 20$

$$F_{\text{statistics}} = \frac{MS_{\text{b/w}} (\text{Var. b/w Sample})}{MS_{\text{within}} (\text{Var. within Sample})}$$

$$F_{\text{statistics}} = 86.56$$

Step 2

For critical for $\alpha = 0.05$

$$\begin{aligned}
 df_{\text{b/w}} &= 3 - 1 = 2 \xleftarrow{df_1} \\
 df_{\text{within}} &= 21 - 3 = 18 \xrightarrow{df_2}
 \end{aligned}$$

$$F_{\text{critical } \alpha=0.05} (2, 18) = 3.55$$

Step 5:

$86.56 > 3.55$, reject H_0
